## ColorMunki 1.1 Highlights

**All-new Advanced Display Functions** – [ColorMunki](#) 1.1 offers users more precise control over their displays than ever before, even when color matching from display to display. The new software now includes the following enhancements:

**Optimized Display profiling** – ColorMunki now offers the ability to optimize display luminance based on either ambient light measurements or user specified luminance values.

**User-defined ambient light levels** – allows users to see actual ambient light levels, giving detailed luminance value information to make any appropriate changes to the work environment before calibrating.

**Precise control of display luminance** – target and actual measured luminance values now displayed while adjusting display luminance, ensuring total accuracy of this function. ColorMunki 1.1 also offers the option for automatic video LUT adjustments, for more exacting control over luminance display levels.

**Optimized display contrast and brightness (backlight) workflow** – ColorMunki’s all-new automated contrast-clipping test provides a user-adjusted contrast option for an assured easier and faster workflow.

**Greater flexibility in display profile naming** – users also have the ability to change the display profile name before saving and applying a new profile, so they can easily identify profiles if they want to change or switch when adjusting for different ambient conditions and color temperatures.

**All-new AppSet Support** – ColorMunki AppSet functionality has been enhanced to support more AppSet functionality than ever, automatically setting the printer profile to ensure color accuracy when printing. AppSet increases ease of use, while reducing the color management knowledge necessary to achieve accurate color results. AppSet now supports these applications:

- CorelDRAW® Graphics Suite X4
- Adobe InDesign CS4 (Mac and Windows)
- QuarkXPress® 8

**Expanded Palette Synchronization** – Palette synchronization for ColorMunki is now expanded to support more software packages than ever, so that user-created color palettes are automatically stored in the correct location and ready for easy access and use with these newly incorporated applications:

- Corel® Painter™ X
- Adobe® Photoshop® CS4,
- Adobe® InDesign® CS4 (Mac and Win platforms)
- QuarkXPress® 8 – note: ColorMunki Version 1.1 also offers palette export/import when automatically configuring Quark 8

**Newly Incorporated License Agreement** – [ColorMunki Photo](#) version 1.1 now contains the previously announced end user license agreement to install and run ColorMunki Photo software on an unlimited number of computers, allowing for a greater degree of flexibility to color management multiple computers typically owned by photographers. [ColorMunki Design](#) continues as is, under the original 3-seat computer license agreement, with the inclusion of all PANTONE libraries.
