Best Color Management System: X-Rite i1PhotoLT

The X-Rite i1PhotoLT offers RGB colour management for professionals and high-end enthusiasts. The multi-purpose Spectrophotometer device can be used for colour calibration and ICC profiling of CRT, LCD and notebook displays plus all printers capable of printing RGB data. The system comes with hardware and i1-Match 3.6 software, and a backup board allows test charts to be scanned, too. The i1PhotoLT enables users to build a consistent colour management workflow and can be upgraded to include CMYK capabilities, or profiling of digital cameras, scanners and projectors.
